Water Issues Program

DC Area Water Issues Program (DCAWIP)

Fall 2010 Weekly Seminar

Thursdays, 4:00-5:30 PM (Refreshments to Follow)

UDC's Van Ness Campus, 4200 Connecticut Ave., NW, Building 41

DC Area Water Issues Program (DCAWIP) -- a feature of UDC's College of Agriculture, Urban Sustainability and Environmental Sciences -- is a comprehensive set of university events open to all students, faculty, and area stakeholders who are interested in water. DCAWIP is designed to be a multi-disciplinary program, exploring issues related to the science and engineering, policy, and socioeconomic aspects of water and watersheds in the DC area. Funded by the US Geological Survey (USGS) through a DC Water Resources Research Institute (DCWRRRI), this Program is being developed with the goal of creating a more cohesive water research community in the DC area.

Every Thursday, at the DCAWIP Fall 2010 Weekly Seminar, speakers from water "stakeholder" organizations provide insightful, practical information about their efforts to address local water issues. Students, scholars, professionals, community leaders and others interested in water issues in the District are encouraged to attend the seminar and stay for refreshments and announcements of community building activities.

Upcoming DCAWIP Seminars for August/September

SEMINAR ONE: DC Regional Severe Flood Risks and Protections

Thursday, August 26, 2010, 4:00-5:30 (refreshments to follow)
